

MEMORY CARD COMPATIBLE WITH MULTIPLE CONNECTOR STANDARDS

ABSTRACT

The invention is directed to a memory card that includes two or more connectors that conform to different connector standards. In one embodiment, the first connector conforms to a device communication connector (DCC) standard to facilitate direct coupling of the memory card to a portable device such as a voice recorder, a digital video camcorder, a digital camera, a personal digital assistant (PDA), a cellular phone, a video game, a digital television, a photo printer, or the like. The second connector may comprise a host computer connector (HCC) for direct coupling to a computing device without an adapter or reader.
